Honor Foods® – Raising the Bar

Honor Foods is a trusted food redistributor that has provided its customers with a wide variety of high-quality grocery, frozen, and dairy products since 1949. With 165,000 sq. feet of refrigerated, frozen, and dry storage, Honor Foods manages over 2,500 products; affording their customers with a large selection of many brand name and exclusive house brand food suppliers.

Headquartered in Philadelphia, Pennsylvania, Honor Foods serves the Northeast region with flexible and reliable deliveries—utilizing dimensioning and weighing systems to continue to provide excellent customer service.

Overcoming Challenges with Accurate Cubic Data

Honor Foods needed to collect accurate dimensioning data quickly to save time and increase productivity. A few of the biggest challenges they solved with the cubic data from the CubiScan 100 is first, capturing accurate dimensions and weight for all their packaging types. Second, with this important dimensional information — build accurate pallet configurations during the picking process. Finally, all outbound trailers are cubed more efficiently, which inevitably led to increased transportation profits. Solid and consistent cube data has become more and more important for every product in a distribution center, especially when shipping over 100,000 cases and receiving over 90,000 cases each week.

To continue in their practice of distinguished customer service, Honor Foods wanted to find a way to streamline multiple aspects of their distribution process. In order to maximize profits and warehouse efficiencies, Honor Foods' goal for dimensioning was to measure all current SKUs, then check all new items at the time of receiving. They'll also measure and weigh 25

random items per week to reconfirm the integrity of their inventory master file. In our modern, fast-paced society, distributers can no longer afford to measure items manually with a tape measure or ship trucks full of air.

Solutions - Check!

According to Joseph Windfelder, Director of IT at Honor Foods, collecting accurate cube data from the CubiScan 100 has helped them improve their efficiency in all aspects of their operations, from slotting to picking, and transportation. "Making sure we have good, solid, and consistent length, width, height and gross weight data at every product item," Joseph points out, is one of his daily objectives. There is no more guesswork when building pallets, whether it is for storage or shipping. The mobility of the measuring device enables it to measure objects in all areas of the warehouse, including the dry, refrigerated, and frozen storage zones, as well as the receiving dock. The CubiScan 100 will help Honor Foods prevent costly and time-consuming mistakes.

CubiScan 100 – The Proven Industry Standard

This complete cubing and weighing system is designed to quickly measure packages with an accuracy of 0.1 inches. The CubiScan 100 is durable and able to withstand a warehouse environment. With an integrated touchscreen, the CubiScan 100 is easy to operate and setup. So get it right the first time, with the CubiScan 100.
